Abstract (en)
[origin: WO2019015984A1] The invention relates to a container (1) having a bottom (2), side walls (3), and an opening (4) surrounded by a peripheral edge (5), wherein the container (1) has a closure device (10) for the opening (4) having a frame (11) and a cover (12), wherein the frame (11) is connected by means of a latching connection to the peripheral edge (5) of the container (1), wherein a holding force of the frame (11) on the peripheral edge (5) equals FH, characterized in that the stiffness of the side walls (3) is so low that the container (1) is deformed under the influence of a force F1 on the side walls (3), such that a releasing force FL, caused by the influence of the force F1 on the side walls (3), on the latching connection does not exceed the holding force FH.
