Abstract (en)

[origin: WO2019016084A1] The invention relates to a transport container (1) comprising a jacket (2), in particular a circular woven jacket, which extends between a bottom part (3) and a top part (4) in such a way that a container volume is formed to receive granulated, liquid, viscous or semi-liquid substances, in particular bitumen, a plurality of, preferably four, stabilising elements being provided and extending along the jacket (2) from the area of the bottom part (3) to the area of the top part (4), the ends of the stabilising elements being connected at least in the area of the bottom part (3) by a bracing structure so as to withstand traction and pressure, wherein at least four lifting loops (5) are mounted in the area of the stabilising elements and at least four lifting loops (5) are mounted centrally in the area between the stabilising elements.
