Abstract (en)

[origin: WO2019016390A1] The invention relates to a sheathing element, in particular a splicing tape, having at least one sheathing section (152a; 152b) which is provided for sheathing at least some sections of at least one insertion end (28a) of at least one splice (14a) in the form of a long splice for a rope (12a), in particular for a wire rope, advantageously for a hoisting rope and/or a pulling rope, having a diameter d and a number N of twisted longitudinal elements (16a-26a), in particular strands. According to the invention, the sheathing section (152a) is suitable for allowing the splice (14a) to be produced with a length of less than  $100 \cdot N \cdot d$ .
