Abstract (en)
[origin: WO2019014704A1] A modular support structure for use in building a wall or floor has opposed side panels (10, 12) connectable in spaced relationship by connection members (14) engaging into receivers (24). Reinforcing (20) can pass through aligned openings (18) of the connection members. External lining or finishing boards 16 attach to the side panels. Construction material e.g. concrete fills the space between the side panels. The components of the structure can be moulded polymer. Connection blocks (30, 32) can lock components together e.g. the side panels to a top (panel 34), end panel(s) (36) and base panel (28).
