Abstract (en)
[origin: WO2019015977A1] The invention relates to a refrigerator appliance comprising an evaporator chamber (5), an evaporator (11) housed in said evaporator chamber (5) and at least one elastic buffer (35) positioned between a flank of the evaporator (11) and a wall (23) of the evaporator chamber (5). The buffer (35) is a moulded part consisting of a softer material than that of an evaporator housing (8) delimiting the evaporator chamber (5). It is connected, by plug-in connection, to the evaporator housing (8) by means of at least one first projection (28) and one recess (42) that receives said first projection (28). Mutually touching surfaces of the first projection (28) and of the recess (42) can move relative to one another in a longitudinal direction of the first projection (28).
