Abstract (en)

[origin: WO2019057601A1] The invention relates to an electric insulation material and/or impregnation resin for a wrapping tape insulation and to an insulation system, for example an insulation system for a rotating electric machine, in particular a medium- or high-voltage machine. By means of the invention, an insulation material and/or an impregnation resin for a wrapping tape insulation is first provided, said material and/or resin exhibiting a substantially increased partial discharge resistance in the presence of compounds which form a SiR2-O- backbone in the cured resin. Thus, the thickness of the insulation system can be drastically reduced, i.e. by up to 20% for example.
