Abstract (en)  
A resealable drinking straw including a straw body (1) which comprise a first sidewall (21), a second sidewall (22) and a bending portion (23), the first sidewall is connected with the second sidewall by the bending portion to form a tubular shape; a hollow portion (30) defined by the first sidewall, the second sidewall (22) and the bending portion (23), extending along a axial length of the straw body; an opening (31) defined by opposing edges of the first sidewall and the second sidewall, extending axially along the straw body; the opening is closed by mating the first sidewall and the second sidewall to allow fluid passage through the hollow portion. This design can solve the problem that the interior of the drinking straw is difficult to wash and provide a leak proof effect for suction.
