Abstract (en)
[origin: CA3070905A1] In a Device (1) for supplementing hair comprising a first plurality of hairs (3), which, at their upper ends (4), are oriented parallel to one another along a main direction (6) and embedded and anchored in a first plastics matrix (5), a second plurality of hairs (3), which, at their upper ends (7), are oriented parallel to one another along the main direction (6) and embedded and anchored in a second plastics matrix (8), a carrier strip (2), which is transversely running to the main direction (6) and on which the first plastics matrix (5) and the second plastics matrix (8) are fixed, and a fastening appliance (15), which is configured for fastening the carrier strip (2) to natural hairs of a wearer of the device (1) for supplementing hair, the hairs (3) of the first plurality of hairs (3) emerging out of the first plastics matrix (5) run along the main direction (6) over the second plastics matrix (8) on that side of the second plastics matrix (8) facing away from the carrier strip (2).
