Abstract (en)

[origin: WO2019020434A1] The invention relates to a sheet-fed printing press (01), wherein the sheet-fed printing press (01) has at least one coating assembly (400; 600; 800) designed as a non-impact coating assembly (400; 600; 800) and wherein the sheet-fed printing press (01) has at least one transport belt (718; 726), which extends having at least one transport section of the circular path thereof parallel to a transport direction (T) along a partial region of a transport path provided for a sheet (02) and wherein at least one coating location (409; 609; 809) of the at least one coating assembly (400; 600; 800) is arranged along the transport section of the at least one transport belt (718; 726) and wherein the at least one printing head (416; 616; 816) is arranged connected to at least one first frame (427; 627; 827) of the at least one coating assembly (400; 600; 800) and wherein the at least one transport belt (718; 726) is arranged connected to at least one second frame (431; 508; 631; 831; 744) via at least one deflection means (724) and at least one radial bearing and wherein the at least one first frame (427; 627; 827), apart from at least one installation surface which is different from the at least one first frame (427; 627; 827) and the at least one second frame (431; 508; 631; 831; 744), is arranged in contact to the second frame (431; 508; 631; 831; 744) at most via flexible connections.
