Abstract (en)

[origin: WO2019020931A1] The transport installation comprises a traction member (15) extending in a circuit and associated with an external power source to be moved along the circuit, a vehicle (20) comprising a power storage system (30), a motor system and a generator system; and a fixed support (18) located adjacent to the circuit. The vehicle generator system includes a generator (32) that can be activated to supply power to the storage system when the vehicle is coupled to the traction member and driven along the circuit by the traction member. The vehicle engine system includes a motor (32) that can be activated to receive power from the storage system and move the vehicle relative to the fixed support.
