Abstract (en)
[origin: WO2019042927A1] The invention relates to a contact device (20), comprising a contact housing (35), a base (30) and a locking device (90), wherein the base (30) delimits a base interior (150), the contact housing (35) engages at least partly in the base interior (150), the locking device (90) has a locking structure (220) on an outer housing circumferential side (200) of the contact housing (35) and a locking pin (120), the locking structure (220) has a set of face teeth (230) and an unlocking portion (225), which adjoins the set of face teeth (230) in the axial direction, the unlocking portion (225) extends at least partly around the contact housing (35) in the circumferential direction in the shape of a groove, the locking pin (120) is connected to the base (30) and protrudes into the base interior (150), the contact housing (35) can be slid relative to the base (30) in the axial direction between a first axial position and a second axial position, in the first axial position the locking pin (120) engages in the set of face teeth (230) and, in the circumferential direction, secures the position of the contact housing (35) relative to the base (30), and in the second axial position the locking pin (120) engages in the unlocking portion (225) and the contact housing (35) can be rotated in the circumferential direction about an axis of rotation (40) relative to the base (30).
