Abstract (en)

[origin: WO2019025052A1] The invention relates to a decontamination arrangement, in particular for pharmaceutical applications, comprising at least one chamber (4) to be decontaminated, in particular an isolation chamber, preferably a manipulation chamber and/or a plenum chamber separated from the manipulation chamber by means of a membrane, further comprising a decontamination liquid container (22) from which a number of atomizers (A, B, C) for producing a decontaminant aerosol that are arranged in the chamber (4) to be decontaminated and are preferably formed as two-substance nozzles can be supplied with decontamination liquid, preferably hydrogen peroxide, by means of at least one supply line (25, 26, 27), wherein the decontamination liquid container (22) is designed as a pressure vessel (16) which is connected to a compressed air source (8) and in which a delivery pressure can be produced by admitting compressed air, in particular sterile compressed air, from the compressed air source (8), and the delivery pressure can be used to deliver the decontamination liquid from the pressure vessel (16) through the at least one supply line (25, 26, 27) in the direction of the atomizers (A, B, C).
