Abstract (en)

[origin: WO2019025084A1] The invention relates to a method for coating a material web (2), in particular a fibrous web, by means of a coating device, the coating device (1) having an application unit (3) for applying a coating medium to the material web and having an enclosure (4), and the application unit being arranged in the interior of the enclosure and the enclosure having a first opening for the entering of the material web and a second opening for the exiting of the material web, characterized that in the interior of the enclosure a positive pressure greater than the ambient pressure outside the enclosure is produced during the coating so that air flows from the interior of the enclosure to outside (5b) of the enclosure through the first opening and/or the second opening.
