Abstract (en)
[origin: WO2019026135A1] A printing-fluid cartridge (30) has a supply portion (34) at a lower end portion and an electrical interface (65) at an upper surface. A plate (104) in a cartridge attachment section (110) has: a main part (1040) extending over an entire length of an inside of the cartridge attachment section in up-down direction; and upper and lower protruding parts (1042, 1044). The main part and supply portion are at least partly overlapped when viewed in widthwise direction. Gap between the lower protruding part (1042) and a first region (1044A) of the upper protruding part is smaller than gap between the lower protruding part and a second region (1044B) of the upper protruding part upstream of the first region. Distances of the first region and of the electrical interface from an upstream end of a supply tube (102) are equal to each other.
