Abstract (en)

[origin: WO2019025195A1] The invention relates to a capsule (100) for holding ingredients for the production of a beverage. The capsule (100) comprises a capsule body (101), which is at least partly covered on a top side of the capsule (100) by means of a cover (120) and which surrounds a first chamber (110) for holding a first ingredient. In addition, the capsule (100) comprises a chamber wall (140, 440), which surrounds a channel-shaped cavity (138), which extends from the top side of the capsule (100) to a bottom side of the capsule (100). The capsule (100) also comprises a valve element (130, 411, 421), with which a first outlet opening (112) of the first chamber (110) can be opened at the chamber wall (140, 440) by means of a rod (221) inserted into the cavity (138) from the top side of the capsule (100), so that the ingredients can flow from the first chamber (110) via the cavity (138) and out of the capsule (100) at the bottom side of the capsule (100).
