Abstract (en)

[origin: WO2019025143A1] The invention relates to a device for withdrawing a web-shaped product from a loop in a withdrawing direction (8), having at least one clamping carrier (1), which has clamps for the web-shaped product. The device according to the invention furthermore has a support frame device (3) on which the clamping carrier (1) is guided, and driving means by means of which the clamping carrier (1) can be reciprocatingly driven in a movement region. In the region between the device side (4) facing the loom and the clamping carrier (1), a support system (5) for the web-shaped product is provided within the support frame device (3), such that a sag of the web-shaped product in said region is prevented or limited by means of the support system (5).
