Abstract (en)

[origin: WO2019025686A1] The invention relates to a clutch actuator (1) comprising a housing (2), an electric motor (8) fastened to the housing (2) and comprising a rotating shaft (17) of axis A, a movement conversion device (25, 53) of the roto-linear type, comprising an input member (25) movable in rotation about an axis B parallel to the axis A and an output member (53) movable in translation along the axis B, the input member (25) being driven in rotation by the shaft (17) of the electric motor (8) via a speed reducer (18,19, 24), the speed reducer comprising a first toothed pinion (18) secured to the shaft (17) of the motor, a second toothed pinion (19) mounted freely about an axis (20) parallel to the axes A and B and meshing with the first pinion (18), and a third toothed pinion (24) secured to the input member (25) and meshing with the second pinion (19), characterized in that the second pinion (19) comprises a single toothed meshing both with the first pinion and the third pinion.
