Abstract (en)

[origin: US2019213415A1] Disclosed is an electronic device. The electronic device includes a display; a camera; a sensor; a storage configured to store position information and work information of a smart machine; and a processor configured to identify a smart machine which is located within a peripheral area of the electronic device based on position information of the electronic device sensed through the sensor and position information of the smart machine stored in the storage, to obtain work information of the identified smart machine from the storage, and to indicate a work area of the smart machine on an image photographed through the camera based on the obtained work information of the smart machine and provide the image including the work area on the display.
