Abstract (en)
[origin: WO2019023725A1] The invention relates to a method for operating an industrial operating panel (1), said method involving the following steps: • - having the touch-sensitive input means (5) detect whether the operator touches the touch surface (7) of the cover plate (6), and having the force detection means (32) simultaneously ascertain the force acting on the touch surface (7); • - having the actuator, in particular the piezo element (31), move the cover plate if predefined or predefinable conditions relating to the detection of contact with and/or the application of force to the touch surface (7) by the operator are met.
