Abstract (en)

The present invention relates to a garment 10 provided with an inflatable protection device 12 comprising an inflatable bag 13 designed to assume alternately a rest configuration, in which it is in a deflated state, and an active configuration, in which it is in an inflated state. In accordance with the invention, the inflatable bag 13 is fixed to the garment 10 by means of a tie 14 which connects a portion 15 of the garment 10 to a perimetral portion 16 of the inflatable bag 13. The tie 14 is intended to assume alternately an untensioned condition and a tensioned condition when the inflatable bag 13 assumes its rest configuration and its active configuration, respectively.
