Abstract (en)

[origin: CN111286923A] The invention relates to a household appliance for caring for laundry items, comprising a laundry drum comprising a drive shaft (4) and a drive pulley (8), which can be rotated about an axis of rotation (A) of the drive pulley (8) by means of a drive belt drive of the household appliance. The drive pulley (8) is connected to the drive shaft (4) in a rotationally fixed manner, and a hub (9) of the drive pulley (8) has at least one form-locking element (10) which cooperates with at least one corresponding form-locking element (10) of the drive shaft (4). At least one form-locking element (10) of the wheel hub (9) extends in the direction of the rotational axis (A) into a region (16) of the wheel hub (9), in which region a spring element (15) is arranged on the wheel hub (9).
