Abstract (en)

[origin: EP3664050A1] In order to manage identification information of sheets stored in a storage case, and the order of the identification information, a sheet handling system includes: a first storage unit to stack sheets; a second storage unit to stack the sheets; a loading apparatus to execute a loading process of taking out the sheets stacked in the first storage unit, and loading the sheets into the second storage unit while maintaining a stacked state of the sheets; and a management apparatus to generate second data from first data based on that the loading process has been performed by the loading apparatus, the first data specifying identification information of the respective sheets stacked in the first storage unit in an order in which the sheets are stacked, the second data specifying identification information of the respective sheets stacked in the second storage unit in an order in which the sheets are stacked.
