Abstract (en)
[origin: US2020176897A1] A spring terminal for connection of an electrical conductor including a bus bar, a clamping spring; a housing; and a lever. The bus bar and the clamping spring and the lever are accommodated at least partially in the housing. The lever has a first support disk with a first partially circular outer contour for supporting the lever in a first bearing shell. The lever has a second support disk with a second partially circular outer contour for supporting the lever in a second bearing shell. The second support disk is spaced apart from the first support disk. The lever has an operating handle that is connected to the first support disk and to the second support disk. The clamping spring has a clamping leg that forms a clamping point with the bus bar for clamping the electrical conductor to the bus bar.
