Abstract (en)
[origin: ES2764771A1] Induction cooking appliance device, The present invention relates to an induction cooking apparatus device (10a-b), in particular an induction furnace device, with at least one induction heating unit (12a-b) having at least one induction heating line element (14a-b). In order to provide a generic induction cooking appliance device with better construction properties, it is proposed that the induction heating line element (14a-b) have at least one quenching area (16a-b) which is intended to partially or completely compensate for at least one thermal variation of the extension of the induction heating line element (14a-b).
