Abstract (en)
[origin: WO2019029781A1] The invention relates to a method for producing a shoe (1), in particular a sports shoe. In order to be able to produce the shoe economically and in the process to achieve a particularly good wearing comfort, the invention provides the steps of: a) producing a shoe upper (2), wherein the shoe upper (2) has an upper region (3) that covers the upper region of the wearer's foot and a lower region (4) that encloses the sole of the wearer's foot; b) producing a sole part (5), wherein the sole part (5) has a bottom region (6) and a lateral wall region (7), wherein the bottom region (6) and the wall region (7) bound an upwardly open receiving space (8) for bulk material (9); c) filling the receiving space (8) with a bulk material (9), wherein the bulk material consists at least in part, preferably entirely, of a thermoplastic elastomer (TPE); d) fastening the shoe upper (2) to the sole part (5) such that the lower region (4) of the shoe upper (2) comes to rest on the bulk material (9).
