Abstract (en)  
[origin: WO2018224896A1] Travel suitcase, which comprises two or more wheels (4) mechanically associated with a containment body (2) and each comprising a hub (5) connected by means of a pin (6) to said containment body (2), and an annular rolling tread (7) advantageously made of rubber, externally mounted on said hub (5) and delimiting an internal air chamber (8) by means of two sidewalls (9) and a curved connector portion (10). The hub (5) comprises an annular support body (50) provided with a through seat (51) and with a radially projecting retention crest (52), interposed between the inner surfaces of the sidewalls (9) of the annular rolling tread (7) so as to close said air chamber (8). Furthermore, the hub (5) comprises two retention plates (11), mechanically coupled to said annular support body (50) by means of anchorage means (12) and provided with one peripheral portion (110) interacting with the external surface (90B) of the two sidewalls (9) of said annular rolling tread (7), in order to keep the latter in a retention relationship against the crest (52) of said annular support body (50).
