Abstract (en)

[origin: WO2019029792A1] The present invention relates to child safety lock apparatuses for preventing access to the interior of the cabinet or drawer in and about the household. The child safety lock apparatus comprises a first anchoring unit; and a flexible or rigid elongate strap member connected to a second anchoring unit at its first end, and to a lock unit at its second end. The first anchoring unit comprises a base plate adapted for fastening to a surface, and an anchoring section connected to the base plate, and configured as a protrusion with two opposing cavities. The lock unit comprises a base plate adapted for being connected to the flexible or rigid elongate strap member, and comprising an opening adapted for receiving the anchoring section through a first surface side; and two sliding members, each adapted for slidingly engagement with one another, and adapted for sliding, in opposite direction in relation to one another, on the base plate on the opposing surface side to the first surface side. Each sliding member comprises a first protrusion adapted for fitting into one of the two opposing cavities in the anchoring section of the anchoring unit.
