Abstract (en)

[origin: WO2019029946A1] Shown and described is a plastic element (1', 1", 1''') for a package (14', 14''), comprising: a main body (1', 1", 1''') of plastic, and a flange (4) for fastening a composite material of a package, wherein the plastic element (2) is produced from a thermoplastic material. In order in the case of single-use packages to create a low-cost possible way of obtaining information about the state of the content of the packages, it is proposed to arrange an electrical, in particular electronic element (15, 15') on the plastic element (1', 1", 1''') or integrate it in the plastic element (1', 1", 1'''). Also shown and described is a package (14', 14'') with such a plastic element (1', 1", 1''').
