Abstract (en)

[origin: WO2019029905A1] The compressor (1) of the invention comprises a housing (2) enclosing the movable parts, a body (3) on which the parts are assembled, a crank (5) rotating in the housing (2), an engine (4) enabling the crank (5) to be rotated, a cylinder (6) enabling pumping the circulating fluid, a face surface (9) disposed on the body (3), a cylinder hole (7) provided on the face surface (9), in which the cylinder (6) is placed, a suction muffler (8) enabling the circulating fluid to reach the cylinder (6) without being heated and the noise caused by the circulating fluid to be prevented, a cylinder head (10) connecting the suction muffler (8) and the cylinder (6), directing the sucked and pumped circulating fluid, a valve plate (11) enabling the circulating fluid to be sucked and pumped by forming a connection between the cylinder head (10) and the cylinder (6), a suction valve leaf (12) enabling the fluid to be sucked into the cylinder (6), an exhaust valve leaf (13) enabling the circulating fluid in the cylinder (6) to be discharged.
