Abstract (en)

[origin: WO2019030286A1] The invention relates to a method for producing an electronic system (S), comprising: - a step of applying a sacrificial member (2) to a support piece (1); - a step of depositing at least one electronic component (3) on the sacrificial member (2); a step of producing a plurality of three-dimensional interconnect paths (5) in order to form the connection ports of the system (S) and to form a redistribution layer connecting the connectors (30) of the electronic component (3) to the connection ports of the system (S); an encapsulation step in order to protect the three-dimensional interconnect paths (5); and a step of separating the system (S) from the sacrificial member (2).
