Abstract (en)
[origin: WO2019034193A1] Device for storing and/or removing wipes, in particular disposable wipes, in particular wet wipes having a working liquid, in particular for cleaning and/or disinfection, comprising a supply region, in particular having a supply package incorporated on the inside for wipes, in particular a wipe roll, a preferably solid-walled vessel, and in particular a covering region on an upper side which cannot be removed without leaving a residue, which covering region has a removal opening through which the wipes can be removed and which can be covered by a closure means, wherein the removal opening particularly has a diameter which is designed to be adapted to a diameter of the supply package in such a way that the supply package as a whole is prevented from being guided through the removal opening, wherein a docking station is provided, wherein the supply region can be connected to a sensor means and/or receiving means of the docking station via an interface means by means of signal exchange, in particular for connection and/or detection and/or activation, wherein the docking station is designed to be particularly adapted for docking for the supply region.
