Abstract (en)
[origin: GB2565562A] A birthing sensor (1 figure 2) for mounting on the tail of a pregnant animal. The birthing sensor comprises a casing (3 figure 2) and an adjustable strap (5 figure 2) for securing the casing (3) to the tail of a pregnant animal. The casing houses monitoring equipment, communication equipment and a power supply. There is further provided a padding insert 7, which comprises a resiliently deformable material for placement intermediate the birthing sensor and the tail of a pregnant animal (see figure 2). The padding insert further comprises a plurality of spaced apart, resiliently deformable frusto-pyramidal members 9. The insert 7 may be formed of a single piece. The insert 7 may comprise a substantially elliptical shaped first part 19 and a substantially rectangular shaped second part 21. The insert 7 may be constructed of rubber.
