Abstract (en)

[origin: WO2019034387A1] A bipolar composite material comprising: (i) a clay whose precursor is an asymmetric 1:1 or 2:1:1 clay particle, comprising alternating tetrahedral and octahedral sheets terminating with a tetrahedral sheet at one external surface plane and an octahedral sheet at another; and, (ii) antimicrobial quaternary ammonium compound attached to a coordinating cation on one of said external surface planes, in an oral care composition, further comprising at least one source of fluoride ions, for use in promoting remineralization of teeth.
