Abstract (en)
[origin: WO2019145436A1] The present invention relates to a construction system comprising construction elements (12) which allow unlimited configurations of structures that can be produced. If the construction system is provided as a toy, the construction elements (12) can be used without undergoing fatigue. The producible structures have sufficient elasticity and can therefore be used, e.g. as a ball. Finally, the construction elements (12) can be manufactured in a simple and cost-effective manner.
