Abstract (en)
[origin: WO2019072424A1] A device (1) for separating feedstock (2) comprises a plurality of rotational elements (3), in particular in the form of worm shafts, the rotational elements (3) forming a deck (4). At least one additional rotational element (5), in particular in the form of a worm shaft, is arranged below the rotational elements (3) forming the deck (4), and said additional rotational element (5) is provided for cleaning an interstice (6) between two immediately adjacent rotational elements (3) of the deck (4).
