Abstract (en)
[origin: WO2019034811A1] The present invention relates to an anti-splash device (1) characterised in that it has at least one element (4) comprising at least one substantially cylindrical float (5, 5') and a flap (6, 6'), one longitudinal edge (61) of the longitudinal edges (61, 62) of which is attached to the float under said float (5) and the other longitudinal edge (62) of which is provided with a ballast (7) such that, when the float (5, 5') is floating on the water surface (8), said flap (6, 6') extends under the entire float (5, 5') and is kept vertically tensioned by the ballast (7), said element (4) being designed to be secured by halyards to a watercraft (3), with the float (5, 5') floating on the water surface (8) in such a way that it is pressed against the hull (2) of said watercraft (3).
