Abstract (en)

[origin: WO2019034438A1] The invention relates to a blank (10) for producing a three-dimensional structure from paper, cardboard, or plastic, in particular a package or the like, comprising at least three lateral surfaces (12, 14, 16, 18) and at least one bottom and/or top tab (20, 24) for forming the three-dimensional structure in a folded state of the blank (10), at least two of the lateral surfaces (12, 14, 16, 18) and/or at least one of the lateral surfaces (12, 16) having the bottom and/or cover tab (20, 24) being connected to one another by means of at least one mechanically produced groove line (36, 38, 40, 56, 58). The mechanically produced groove line (36, 38, 40, 56, 58) is produced without ablation or other removal of material from the blank (10), at least one groove (62, 64, 66, 68, 70) being produced by means of a laser within at least one of the lateral surfaces (14, 16, 18) connected by means of the groove line (36, 38, 40, 56), and the groove (62, 64, 66, 68, 70) being configured to run at an angle to the groove line (36, 38, 40, 56) and impinging on or intersecting the groove line. The invention further relates to a three-dimensional structure made of paper, cardboard or plastic and to a folding box.
