Abstract (en)
[origin: WO2019034487A1] The invention relates to a plug-in coupling for electrically contacting an electric motor comprised by a hand-held power tool with a battery unit, which is to be accommodated by the hand-held power tool, wherein the plug-in coupling has at least one electrical contact plate to be connected to the hand-held power tool and a corresponding contact plug with two opposing spring-like contact limbs, wherein the contact plug is to be arranged on the battery unit and is to be slid onto the contact plate in the sliding-on direction and withdrawn from same in the withdrawal direction, and wherein each of the spring-like contact limbs has a contact region which electrically contacts a respective side of the contact plate in the contacted state, wherein the contact regions are spaced apart from one another, in the non-contacted state, relative to a deflection direction of the spring-like contact limbs.
