Abstract (en)

A folding display stand (1) made of sheet material, comprising at least one rear wall (2), at least a pair of substantially flat and vertical side walls (3', 3'') and a plurality of substantially horizontal shelves (4', 4'') interposed between the side walls (3', 3''). The rear wall (2), the side walls (3', 3'') and said shelves (4', 4'') are simply formed from a pair of sheet elements, i.e. a front sheet element (6) and a rear sheet element (7) respectively, wherein said sheet elements (6, 7) are coupled together to define a foldable structure that is able to alternate from an idle configuration with the sheet elements (6, 7) in mutually overlapping relationship to an operating configuration with the sheet elements (6, 7) in mutually spaced relationship and with the shelves (4', 4'') in vertical superimposed relationship. The front element (6) comprises a central portion (8) and two lateral end portions (9A, 9B) defined by first fold lines (10A, 10B), the rear element (7) comprises a central portion (11) and two lateral end portions (12A, 12B) defined by second fold lines (13A, 13B) and the shelves (4', 4'') are formed from the central portion (8) cut out to form at least two flat panels (14A, 14B) and folded along respective third fold lines (15A, 15B) substantially perpendicular to the first and second fold lines (10A, 10B; 13A, 13B).
