Abstract (en)

[origin: EP3670375A1] Foot (1) for pallet (P), a lower part (11) and an upper part (12) being defined in the foot (1), the lower part being formed by a lateral wall (L11) and a bottom wall (B11) and the lower part (11) having a cross section smaller than the upper part (12), so that when stacking one pallet (P) on top of another pallet (P), the feet (1) can be fitted thus reducing the height of the resulting stack, a geometric envelope being defined in the lower part (11), wherein the lateral wall (L11) comprises a movable part (13), the movable part (13) being displaceable between a hidden position in which it does not protrude from the geometric envelope, and an extension position in which it protrudes from the geometric envelope. The invention also relates to a pallet (P) comprising a pallet body (2) and a plurality of replaceable feet.
