Abstract (en)  
A device (26) for controlling both a motorization unit (20) of a roll-up cover installation (1) and a plurality of lighting elements (18) applied to at least one component (2,4,6,8,10) of said roll-up cover installation (1), characterized in that it comprises a casing (27) which can be inserted into a component of said installation (1) or its support structure and/or can be associated externally to said installation (1) or to its support structure, or in its vicinity, inside said casing (27) being arranged and housed:- at least one power supply unit (34) for said motorization unit (20) and for said lighting elements (18),- at least one unit (35) for monitoring and control connectable with said motorization unit and said lighting elements (18) of said roller cover installation (1),- a receiver or transceiver (36) connected and/or incorporated in said control and command unit (35) to receive from the outside control signals for controlling, based on these, said motorization unit (20) and said lighting elements (18),and also characterized in that said control unit (35) is configured so that, if an activation command of the motorization unit (20) is received while the lighting elements (18) are supplied, the power for the supply of the lighting elements (18) is automatically reduced, thus also reducing the brightness generated by these elements, to be used to supply the motorization unit (20).
