Abstract (en)  
The present invention provides a shimming apparatus. The apparatus includes a body portion having at least two leg portions, connected at a proximal end by a shoulder portion, and at distal ends thereof are free ends. The leg portions have upper and opposing lower faces, and at the distal ends of the leg portions, the upper and opposing lower faces include inclined portions with respect to longitudinal axes of the leg portions, extending at least partly along the length of the leg portions towards the proximal end.
