Abstract (en)
[origin: ES2768074A1] The present invention refers to a cooking system (10a-b), in particular, to an induction cooking system, with at least one support plate (12a-b) and with at least one extractor fan unit (16a -b), which has at least one fan wheel (18a-b) and at least one drive unit (20a-b) to drive the fan wheel (18a-b) and which partially or completely sucks by means of the fan wheel (18a-b) the vapors that are generated in at least one operating state from at least one cooking area (22a-b) through at least one extraction drain (14a-b) of the support (12a-b). In order to provide a generic cooking system with better properties in terms of its construction, it is proposed that the drive unit (20a-b) be arranged outside of a space (24a-b) partially or completely surrounded by the fan (18a-b).
