Abstract (en)  
The Invention relates to a heat exchanger for a refrigerant fluid loop, the heat exchanger comprising at least one inlet configured to allow a refrigerant fluid to enter in the heat exchanger, and at least one outlet configured to allow the refrigerant fluid to exit the heat exchanger, the heat exchanger comprising at least one block (200) in which a filter (300) is arranged, characterized in that the at least one block (200) is arranged downstream the at least one outlet of the heat exchanger, in that the block (200) comprises at least one first part (201) and at least one second part (202) secured to the first part (201), and in that the filter (300) is arranged between said first part (201) and said second part (202).
