Abstract (en)

[origin: EP3671718A1] The invention is concerned with a magnetic floating device (10) comprising a base unit (11) and a floating unit (12). The base unit (11) comprises a magnetic floating controller (14) and at least one base magnet (15). The floating unit (12) comprises a functional component (28), a control circuitry (30) and at least one floating magnet (31). The functional component (28) comprises a display panel (32) with a pixel matrix. The control circuitry (30) is designed to actuate at least one pixel element of the pixel matrix for displaying a graphic display object (33) at a constant position (P) relative to a reference point (34) on the base unit (11) by shifting the actuation of the respective pixel elements of the graphic display object (33).
