Abstract (en)  
[origin: US2020365994A1] The monopole wire-plate antenna includes a ground plane, a roof arranged at a distance from the ground plane and at least one electrically conductive element electrically linking the ground plane to the roof. The antenna includes a supply loop arranged substantially orthogonally with respect to the ground plane, the supply loop being open such that it has two opposing longitudinal ends arranged so as to be linked to a differential connection.

Abstract (fr)  
L'antenne (100) fil-plaque monopolaire comporte un plan de masse (101), un toit (102) agencé à distance du plan de masse (101) et au moins un élément électriquement conducteur (103a) reliant électriquement le plan de masse (101) au toit (102). Cette antenne (100) comporte une boucle d'alimentation (107) agencée de manière sensiblement orthogonale par rapport au plan de masse (101), ladite boucle d'alimentation (107) étant ouverte de telle sorte qu'elle comporte deux extrémités longitudinales (108, 109) opposées agencées de sorte à être reliées à une connexion différentielle.
