Abstract (en)
[origin: WO2019038567A1] A container for product to be dispensed takes the form a body defining a compartment for storing frozen confection such as ice cream and sorbet, and a receptacle releasably coupled with the body. The body has a lower region with an outlet through which the frozen confection to be dispensed from the compartment. The receptacle defines an open chamber, when decoupled from the container, for receiving frozen confection dispensed through said outlet. An external profile of the body is configured to nest with internal profile of the receptacle, with the outlet of the body covered by the receptacle when the receptacle is releasably coupled with the body. An internal surface of the receptacle is configured to engage an external surface of the body, for releasably coupling the receptacle with the body.
