Abstract (en)

[origin: WO2019038310A1] The invention relates to a driving platform (1), comprising a chassis (2), at least three wheels (3), which are mounted on the chassis in a rotationally driven manner, a control device (4) arranged on the chassis, which control device is designed to autonomously navigate the driving platform on a ground depending on the environment thereof in such a way that the control device automatically actuates the at least three wheels, and at least one coupling device connected to the chassis, which is designed to couple a motor vehicle with the driving platform in order to autonomously move the motor vehicle coupled by means of the coupling device, that is, actuated by way of the control device of the driving platform.
