Abstract (en)

[origin: WO2019037967A1] The invention relates to a piston pump assembly (1) for a hydraulic power brake system of a vehicle, comprising an electric motor (2), a planetary transmission (3), helical gearing (4), and a piston (5) which can be moved in a cylinder (7). In order to rotationally secure the piston (5) in the cylinder (7), the piston (5) has a ring (15) which is rotationally fixed to the piston by means of a formfitting connection, is connected to the piston by a shaping process, and comprises semicircular grooves on the outer circumference of the ring, wherein cylinder pins (13) which are arranged in the cylinder (7) in a fixed axially parallel manner engage into said grooves.
