Abstract (en)
[origin: WO2019117833A2] The present invention is an electronic control system (1) having a main body (10), a main board (20) connected to said main body (10), a processor (21) provided on said main board (20) and at least one active sensor module (40) assembled to the main board (20) in a manner connected to said processor (21) through a data line (22), characterized in that a module region (13) is provided in the main body (10) and a module socket (23) provided in a manner opening to said module region (13) on the main board (20) and configured such that a functional module (50) can be connected thereto, a memory unit (26) is provided wherein a unique parameter is predefined which is associated with a functional (50) module which can be connected to said module socket (23).
